## Professional Men's Eyebrows & Eyeliner

Want Strong Looking Eyebrows?

What makes this a strong masculine look?

For stronger more masculine looking eyebrows, you should consider four things about [permanent makeup](#) for your eyebrows:

**Brow Volume** - Fuller, thicker brows are a primary feature with strong eyebrows. Using a powder brow volumizer selected to your natural color will coat the individual hairs and make them look up to 1.5 times thicker. Unlike a liquid volumizer which can smudge and go on in 'globs', fine dry powder will not smudge or run, not even in the rain or when swimming.

**Brow Shape** - Brow shape also enhances the strong look to eyebrows. There is a major difference between female and male shaped eyebrows. Female shaped eyebrows have a high arch in the middle and taper to a thin delicate finished tail. Whereas, male shaped eyebrows are more flat (lacking the prominent arch) and taper to a blunt

tail.

**Brow Color** - Graying eyebrows lose vitality. By coating your eyebrows with a powder based color, you eyebrows will look stronger and deeper in color. Vitality and youthfulness will be restored to your look.

**Brow Position** - Brow position plays an important role in strong-looking eyebrows. The closer the eyebrow is to the eye, the larger it will appear that the area is bigger. Brows that are further from the eye give the illusion of a smaller eye area. To achieve a stronger looking brow, the eyebrow should be close the eye.

Stronger looking eyebrows coupled with permanent eyeliner complements the look. Together they restore the youthful, natural look that people subtleties are drawn to.
