## Professional Photo

## Rejuvenation

Are you disappointed with the quality and look of your skin? Do you suffer from the affects of the damaging sun? Are you suffering from skin abnormalities brought on by medical conditions? If so, give us a call to setup a FREE consultation to see how Photo Rejuvenation can help to restore the natural, youthful look to your skin.

Over time, your skin can be damaged from a variety of factors:

• Sun damage can cause early signs of aging with wrinkles on the face, neck and hands. Pigmentation changes in the skin can occur as a result of the natural aging process or over exposure to the sun. Medical conditions flushing, redness, rosecea and other vascular conditions

### Frequently Asked Questions

1. How safe are photo rejuvenation treatments?

Photo Rejuvenation treatments are much like laser hair removal treatments. Advances in technology make photo rejuvenation treatments very effective and very safe for your skin.

2. Will I experience pain or discomfort during photo rejuvenation treatments?

Again, photo rejuvenation treatments are much like laser hair removal treatments. Each individual level of tolerance for discomfort is different. Patients report feeling a slight snap or pinch. Topical cremes may be applied prior to the treatments to numb the skin and eliminate any discomfort that might be felt during the treatment.

3. What can I expect after a photo rejuvenation treatment?

Immediately after a photo rejuvenation treatment, your skin will have a slight pink color to it. Each treatment will begin to lighten the pigmentation of the treated areas. Wrinkles and other textural features will begin to fade as well while most of these changes occur near the end of the treatment cycle. After each treatment you will be able to resume normal daily activities.

4. How many treatments are required?

Recommended treatment duration is typically five (5) treatments performed on a monthly basis.
